

HOW TO INSTALL THE FERITE RINGS

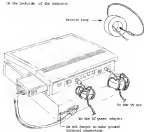

When you install and start to use the CP-1000 Super Compact Monitor you might experience an interference caused from the existence of high frequency waves or magnetic fields with an antenna element, electric or magnetic coils, cables, etc.

It is a good idea to protect your computer or the equipment that you have spent several hours to create by installing the protection as follows.

Put the cable pass thru the hole of the ferrite ring about 4 or 5 times.

Slide the rings about 1cm from the end of the cable.

On the backside of the computer.

Next, install the video cable to the rear camera of the CP-1000 shown above when you use the video monitor [5.4.2.3].
